* Facilities that do not report CPT-4 procedure codes are not included in AMB ST 1-4 and AMB ST 1-5 because APG classifications cannot be calculated for these facilities.

+Facilities that reported some but not all CPT-4 procedure codes may be included in AMB ST 1-4 and AMB ST 1-5, but their APG classifications may be under reported.

2001 Utah Hospital and Freestanding Ambulatory Surgery Center Utilization and Charge Profile of Outpatient Surgery Executive Summary

The 2001 Utah ambulatory surgery database contains data on selected procedures from 61 ambulatory surgery facilities, which includes 43 acute care hospital based surgery centers and 18 freestanding ambulatory surgery centers. The annual Utah Hospital and Ambulatory Surgery Center Utilization and Charges Profile is a compilation of statewide and facility specific summary statistics for selected ambulatory surgical procedures occurring between January 1, 2001 and December 31, 2001. This profile was designed to meet the needs of the health industry and policy makers to assess the volumes, average charge, most frequently-performed procedures, and other variations among the performances of hospitals and ambulatory surgical centers in Utah. Throughout this report, "all facilities" refers to all ambulatory surgery facilities, "hospitals" refers to the acute care hospital based surgery centers and "FASCs" refers to freestanding ambulatory surgery centers.

Highlights

- There were 235,239 patient visits and 319,486 ambulatory ICD-9 procedures for all facilities reported in 2001. Approximately 70% of surgical outpatient visits and 87% of ambulatory procedures occurred in hospitals. FASCs accounted for the remaining 30% of patient visits and 13% of ICD-9 procedures.
- The statewide total charge reported for all reported ambulatory procedures for all facilities is \$528,484,751 in 2001. The average charge for all reported ambulatory procedures is \$1,744 with the average hospital and FASCs charges being \$1,880 and \$1,129 respectively. The total charge is not the actual payment or reimbursement.
- The most commonly reported ambulatory ICD-9 procedure for all facilities was Colonoscopy, ICD-9 45.23, N=12,738). Colonoscopy also was the most commonly reported procedure reported by hospitals (ICD-9 45.23, N=12,045). One Stage Insertion of Intraocular Lens Prosthesis During Cataract Extraction (ICD-9 13.71, N=4,690) and Cataract Phacoemulsification and Aspiration (ICD-9 13.41, N=4,650) were the two most commonly reported ICD procedures reported by FASCs.
- The most commonly reported CPT-4 surgical procedure for all facilities was Colonoscopy, Flexible, Diagnosis Separate Procedure (CPT-4 45378, N=14,855). The most commonly reported CPT-4 surgical procedure in hospitals was Diagnostic Upper GI Endoscopy and Biopsy of the Esophagus (CPT-4 43239, N=8,910). For FASCs, it was Remove Cataract, Insert lens (CPT-4 66984, N=8,177).

-
- The most commonly reported procedure APG (Ambulatory Patient Groups) for all facilities was Lower Gastrointestinal Endoscopy (APG 117, N=32,027). For hospitals it was also Lower Gastrointestinal Endoscopy (APG 117, N=19,063), followed by Simple Facial and ENT Procedures (APG 235, N=14,015). For FASCs the most commonly reported procedures Lower Gastrointestinal Endoscopy (APG 117, N=12,964 followed by Cataract Procedures (APG 214, N=8,376). Hospitals and FASCs performed comparable volumes of procedures on APG Nervous System procedures (APG 10, 10,298 and 8,437 respectively) and APG Eye and Ocular Adnexa procedures (APG 11, 10,463 and 13,795 respectively). In contrast, hospitals reported 29 times as many Cardiovascular System procedures as FASCs performed (APG-04, 7,948 and 274 respectively).
 - The highest average charge was Cochlear Device Implantation (APG 231, \$33,347 for hospitals, FASCs did not report this procedure). Second highest was Neurostimulator and Ventricular Shunt (APG 197, \$19,250 for hospitals and \$5,606 for FASCs). Third highest was Pacemaker Insertion and Replacement (APG 078, \$16,223 for hospitals. FASCs did not report this procedure). Fourth highest was Insertion of Penile Prosthesis (APG-152, \$13,185 for hospitals, FASCs did not report this procedure). The average charges of Eye and Ocular Adnexa (APG11) procedures were comparable for hospitals and FASCs, \$2,071 vs. \$2,275 respectively. Only records with a single APG are included in the calculation of average total charges.

Introduction

The Utah Hospital and Freestanding Ambulatory Surgery Center Utilization and Charge Profile of Outpatient Surgery standard report (AMBST-1) is an annual report from the ambulatory surgery data released by the Utah Health Data Committee. The AMBST-1 report will serve as a basis for verification of the reported data and for development of smaller, consumer oriented reports. In addition, the ambulatory surgery data will be used in the evaluation and monitoring of ambulatory surgery facility utilization trends.

The Health Data Committee

The Utah Health Data Committee is composed of 13 governor-appointed members. The committee was created through the Utah Health Data Authority Act of 1991 and is staffed by the Office of Health Care Statistics (OHCS), which manages the Utah ambulatory surgery database.

The committee's purpose, per Chapter 33a, Title 26a, Utah Code Annotated, is *"to direct a statewide effort to collect, analyze and distribute health care data to facilitate the promotion and accessibility of quality and cost-effective health care and also to facilitate interaction among those with concern for health care issues."*

The Ambulatory Surgery Database

Administrative Rule R428-11, which became effective in March of 1998, mandated that all Utah licensed hospital-based surgery centers (referred to as "hospitals" in this report) and freestanding ambulatory surgery centers ("FASCs") report information on selected ambulatory surgical procedures. However, voluntary reporting started on January 1, 1996.

The database contains consolidated information on complete billing, medical diagnosis and procedure codes, personal characteristics describing a patient, the services received, and the charges billed for each visit for a selected subset of ambulatory surgical procedures. All reported procedure codes required by Administrative Rule R428-11 are listed below.

Types of Surgical Service to be Submitted if Performed in Operating Room Equipped for Anesthesia

Description	CPT-4 Codes	ICD-9-CM Procedure Codes
Mastectomy	19120-19220	85.0-85.99
Musculoskeletal	20000-29909	76.0-84.99
Respiratory	30000-32999	30.0-34.99
Cardiovascular	33010-37799	35.0-39.99
Lymphatic/Hematic	38100-38999	40.0-41.99
Diaphragm	39501-39599	<i>ICD-9 Codes in Respiratory</i>
Digestive System	40490-49999	42.0-54.99
Urinary	50010-53899	55.0-59.99

Description	CPT-4 Codes	ICD-9-CM Procedure Codes
Male Genital Laparoscopy	54000-55899 56300-56399	60.0-64.99 <i>ICD-9 Codes in Musculoskeletal, Digestive & Female Genital</i>
Female Genital	56405-58999	65.0-71.99
Endocrine/Nervous	60000-64999	01.0-07.99
Eye	65091-68899	08.0-16.99
Ear	69000-69979	18.0-20.99
Nose, Mouth, Pharynx	<i>CPT Codes in Musculoskeletal & Respiratory</i>	21.0-29.99
Heart Catheterization	93501-93660	<i>ICD-9 Codes in Cardiovascular</i>

These selected procedures are significant surgical procedures. A significant procedure is a procedure which is normally scheduled, constitutes the reason for the patient visit and dominates the time and resources expended during the visit. R428-11 does not require ambulatory surgery facilities to report ancillary procedures. The database does contain nonsignificant procedures but only as entries for a visit that includes multiple procedures, at least one of which must be a significant procedure. Visits during which no significant procedure was performed are not reported by hospitals or FASCs and thus are not included in the database.

The Office of Health Care Statistics has collected information from 61 Utah ambulatory surgery facilities in 2001. Of these 61 facilities, 43 are acute care hospitals, while the remaining 18 are FASCs. Western Medical Surgical Center closed and moved into Cache Valley Specialty Hospital in October 2001.

Data Processing and Quality

Data Submission

The Utah Ambulatory Surgical Submittal Manual provides data element definitions to encourage all hospitals and FASCs to report the data in a standard format. The Office of Health Care Statistics receives ambulatory surgery data quarterly from these facilities in various formats and media. The data are then converted into a standard format.

System Edits

The data are validated through a process of automated editing and report verification. Each record is subjected to a series of edits that check for accuracy, consistency, completeness, and conformity with definitions specified in the data submittal manual. The data supplier is notified of records failing the edit check and is provided with corrections or comment on these records.

Facility Reviews

Each facility is provided with a 35 day review period to validate the compiled data against the facility records. Any inconsistencies discovered by the facilities are reevaluated or corrected.

Patient Confidentiality

It is important to the committee that no individual patient is identifiable from the Ambulatory Surgery Public-Use Data Files. Public disclosure of individual ambulatory surgery data is to be carefully guarded by the use of calculated or aggregate values. To this end, patient age and payers are grouped, Utah residential zip codes with less than 30 visits in a calendar year are grouped into county abbreviations, and zip codes outside Utah with less than 30 visits are grouped into state abbreviations.

About This Report

This report is designed to be a tool for analysis of health care issues, and includes a wide range of data for applications by many user groups. Consumers, employers, payers, policy makers and providers may begin to use this type of data to facilitate health care decisions.

Organization of Report

This report provides summary information and comparisons at the statewide level and at the facility level for ICD-9-CM (International Classification of Diseases, 9th Revision, Clinical Modification), CPT-4 (Current Procedural Terminology, 4th edition) and APG (Ambulatory Patient Groups) codes and demographic data. Several sections of the report have separate breakdowns for each of the two basic types of facilities: acute care hospital outpatient surgery centers (hospitals) and freestanding ambulatory surgery center (FASCs). The tables in this report are primarily procedure based, with the exception of the demographic tables, which are based on visits.

CPT-4 and ICD-9-CM Codes

In general, hospitals and FASCs use different coding systems. Hospitals tend to use ICD-9-CM codes, while FASCs use primarily CPT-4 codes. For 2001, 61 facilities reported ambulatory surgery data. Among these 61 facilities, 43 were hospitals and the remaining 18 were FASCs. Among the 43 hospitals, 36 reported both ICD-9 and CPT-4 codes, 7 reported only ICD-9 codes, and none reported CPT-4 codes exclusively. Among the 18 FASCs, 12 reported CPT-4 codes exclusively, 6 reported both ICD-9 and CPT-4 codes, and none reported ICD-9 codes exclusively. For one FASC that reported both ICD-9 and CPT-4 codes, several of the ICD-9 codes are incorrect. The tables for that FASC that include ICD-9 codes must be interpreted with caution.

The CPT-4 and ICD-9 coding systems are similar but not identical. For example, dermabrasion, which is the removal of the outer layer of the skin, can be reported with the single ICD-9 code, 86.25. In contrast, the CPT-4 coding system divides dermabrasion into the three separate CPT-4 codes, representing dermabrasion performed on the entire face (15780), a segment of the face (15781), or another part of the body (15783).

This report presents separate sets of summary statistics for ICD-9 and CPT-4 values and categories. Because the procedures are coded differently under the CPT-4 and ICD-9 systems, the total number of procedures within each of the CPT-4 or ICD-9 categories may not match (See Table 2, for example).

APGs (Ambulatory Patient Groups)

The APG patient classification system, a CPT-based grouper software product, was developed by 3M Health Information Systems. It was designed to explain the type and amount of resources used in an ambulatory visit, serving a similar function for outpatient visits as DRGs (Diagnostic Related Groups) do for inpatient care. Where DRGs use ICD-9 primary diagnoses as the initial classification variable to develop mutually exclusive DRG categories, APGs use CPT-4 procedures. For example, APG-214 is a cataract procedure, which

includes CPT-4 codes 66840, 66850, 66852, 66920, 66930, 66940, 66983, 66984, 66985, and 66986¹.

As procedures are grouped into mutually exclusive APGs, procedure APGs are grouped into mutually exclusive procedure APG categories. In an analogous manner, DRGs are grouped into mutually exclusive MDCs (Major Diagnostic Categories). As stated in the *Ambulatory Patient Groups Definitions Manual, Version 2.0*, by 3M Health Information Systems, these APG categories correspond to “general bodily systems” such as the integumentary system or the respiratory system. APG version 2.0 was used for this report. The basic unit of payment in the development of the APGs is the visit, which is defined as any interaction between a patient and a health care professional.

The APG patient classification system groups thousands of CPT-4 codes into a manageable set of APG procedures or categories. This allows the OHCS to report all ambulatory services to users in a useful way and to produce meaningful comparisons between ambulatory care facilities. However, the OHCS started using the APG software recently to analyze the ambulatory surgery data. As the APG software developer acknowledged, “the data elements used to define APGs were limited to the information routinely collected on the Medicare claim form”¹. In contrast to Medicare data, the Utah ambulatory surgery data include all ages of patients and all types of payer sources. These differences in patient population require users to be aware of the limitations of the APG software and to pay special attention when using APGs to analyze non-Medicare populations.

Number of Procedures

In the Utah ambulatory surgery database, one record is generated for each patient visit. This record can have up to six CPT-4 entries, six APG entries, and six ICD-9 entries, with at least one entry representing a significant procedure. Many records have multiple ICD-9 or CPT-4 entries representing multiple procedures. Since this report is based on procedures, not visits, the total number of procedures performed will be greater than the total number of reported ambulatory surgery visits. Also, the number of reported procedures differs, depending on the procedure code system used. For instance, in 2001, the total number of reported ambulatory surgery visits was 235,239, but the total number of reported procedures performed was 319,486 under the ICD-9 coding system and 315,083 under the CPT-4 coding system (See Table 2). Among all facilities that report ICD-9-CM codes, 41% of all visits include multiple procedures. For all facilities that report CPT-4 codes, this percentage is higher at 55%. These percentages are not listed in the report tables.

This report only contains APG values that represent significant procedures. CPT-4 and ICD-9 procedures are reported differently. Nonsignificant procedures are represented in tables that summarize ICD-9 and CPT-4 values. For example, Table 2 contains a category called “other” for both the CPT-4 and ICD-9 coding system, which consists of nonsignificant procedures in both systems. Again, any nonsignificant procedure reported in the database occurred during a visit in which at least one significant procedure was performed.

Average Total Charges

Each visit has a total charge associated with it, which represents the total charges for all services rendered. Thus, for visits in which multiple procedures are performed, it is impossible to ascertain the charge for an individual procedure performed. Because of this, average total charges are calculated using only records that have single CPT-4, ICD-9 or procedure APG entries. Sixty-seven percent of all visits that include CPT-4 procedures have single CPT-4 entries and 53% of all visits that include ICD-9 procedures have single ICD-9 entries. As mentioned above, in contrast to ICD-9 values and CPT-4 values, only APG values that represent significant procedures appear in the report. If only one CPT-4 or ICD-9 procedure is reported for a visit, that procedure will be significant. In these cases, total charges for CPT-4 or ICD-9 values are calculated from significant procedures as they are for APGs.

Patient Demographics

Summary statistics are given for gender, age, source of admission, discharge status, primary payer and local health district of patient residence.

Selected Procedures

A patient visit is reported only if one or more of a selected group of procedures is performed. The procedure does not have to be the principle procedure. All significant procedures performed during a visit are treated equally in this report.

Description of Tables

Statewide Tables

This report includes one chart that summarizes characteristics of all facilities and five tables that report statewide summary information on ambulatory surgeries in 2001.

Chart 1: Hospital and Freestanding Ambulatory Surgery Center (FASC) Characteristics.

Table 2: The number and percentage of procedures performed for selected ambulatory surgery reporting categories. Grouped ICD-9 and CPT-4 codes are reported separately. The number and percentage of procedures performed for all facilities, hospitals and FASCs are listed. The purpose of Table 2 is to present a statewide overview of the volume of ambulatory surgery procedures. The total number of ICD-9 procedures (319,486) does not match the total number of CPT-4 procedures (315,083). This is a result of the fact that ICD-9 and CPT-4 are different coding systems and that some hospitals report only ICD-9 codes whereas some FASCs report only CPT-4 codes. Direct comparison between the top ICD-9 panel and the bottom CPT-4 panel would not be meaningful.

Table 3: Statewide total numbers and percentages for the 20 most commonly performed procedures, ICD-9 and CPT-4 codes listed separately. A breakdown by facility type (freestanding or hospital) is included. The listed procedures are not restricted to significant procedures.

Table 4: Statewide total frequency for each procedure APG category (N=14) and procedure APG (N=111). Statewide totals for all facilities, all hospitals and all FASCs are listed. Table 4 provides a detailed and comprehensive view of the ambulatory surgery groups. The APG values are restricted to significant outpatient procedure APGs.

Table 5: Statewide average total charges for each procedure APG category and procedure APG. Statewide average total charges for all facilities, all hospitals and all FASCs are listed. Only records with a single procedure code or APG are included in the calculation for this table. One patient visit could have more than one APG if the patient has multiple procedures performed. The facilities report only the total charge for all procedures performed in a visit. Therefore, direct comparison of average total charges at the visit level may compare “apples” (only procedure performed) to “oranges” (multiple procedures performed), which will lead to biased conclusions.

Table 6: Statewide ambulatory surgery patient profile. Gender, age, source of admission, discharge status, primary payer category and patient’s local health district are listed. Statewide total numbers of patient visits and percentage distributions are included, as well as totals for freestanding and hospital based facilities. One patient visit might include a single procedure or multiple procedures. Thus, the total number of patient visits in Table 6 is smaller than the total number of procedures in Table 2.

Facility Tables

A set of six tables is designed for each facility in a format similar to the statewide tables. Each table also provides comparative information on individual facilities and their peer group's performance. The Health Data Committee System Technical Advisory Committee proposed two peer groups: a hospital group and an FASC group.

AMB ST 1-1: The number and percentage of procedures performed for selected ambulatory surgery reporting categories for each facility. ICD-9 and CPT-4 codes are grouped separately. The number and percentage of procedures performed in the selected categories for hospitals statewide is listed along with the totals for each particular hospital. Likewise, the number and percentage of procedures performed in the selected categories for FASCs statewide is listed along with the totals for each particular FASC.

AMB ST 1-2: Facility specific total numbers and percentages for the 20 most commonly performed procedures, ICD-9 and CPT-4 listed separately. For each hospital, the statewide percentage for all hospitals combined for these procedure codes is included. A similar listing occurs for FASCs. The top 20 procedures for either coding system (ICD-9 or CPT-4) are not restricted to the significant procedures.

AMB ST 1-3: Facility specific average total charges for the 20 most frequently performed ICD-9 procedures and/or CPT-4 procedures for each facility, listed in order of descending frequency. The average total charge for each procedure for the particular facility is listed, as well as the statewide average total charge for the particular facility type. Only records with a single procedure code are included in the calculation.

AMB ST 1-4: Facility specific frequency for each procedure APG category and procedure APG. Statewide total numbers for either hospitals or FASCs are listed, depending on the type of facility in question.

AMB ST 1-5: Facility specific average total charge for each procedure APG category and procedure APG. Statewide average total charges for either hospitals or FASCs are listed, depending on the type of facility in question. Only records with a single procedure code or APG are included in the calculation.

AMB ST 1-6: Facility specific patient profile. Gender, age, source of admission, discharge status, primary payer category and patient's local health district are listed. Facility specific total numbers and percentages are included, as well as statewide totals for either freestanding or hospital based facilities, depending on the type of facility in question.

Description of Terminology

Reporting Category: Required reporting ICD-9 and CPT-4 codes defined by Administrative Rule R428-11.

All Facilities: All reporting freestanding ambulatory surgery centers (FASCs) and hospital based ambulatory surgery centers (hospitals) in this report.

All Hospitals: All reporting hospital based ambulatory surgery centers (hospitals) in this report.

All FASCs: All reporting freestanding ambulatory surgery center (FASCs) in this report.

Average Total Charge: Average statewide total charge included in the billing form for hospital group or FASC group. This is different than the cost of treatment or payment received by the facility. Total charge is the amount

with a revenue code of “001” on the UB92 form.

Sources of Admission:

Physician Referral - The patient was admitted to this facility upon recommendation of his or her personal physician not affiliated with an HMO.

Clinic Referral - The patient was admitted to this facility upon recommendation of this facility's clinic physicians.

HMO Referral - The patient was admitted to this facility upon recommendation of an HMO physician.

Other Hospital - The patient was admitted to this facility as a transfer from an acute care facility where he or she was an inpatient.

Skilled Nursing Facility - The patient was admitted to this facility as a transfer from a skilled nursing facility where he or she was an inpatient.

Other Health Care Facility - The patient was admitted to this facility as a transfer from a health care facility other than an acute care or skilled nursing facility.

Emergency Department - The patient was admitted to this facility upon recommendation of this facility's emergency room physician.

Court/Law Enforcement - The patient was admitted to this facility upon the direction of a court of law, or upon the request of a law enforcement agency representative.

Local Health District of Patient Residence:

The following are multi-county districts.

Bear River - Includes Box Elder, Cache and Rich counties.

Southeastern Utah - Includes Carbon, Emery, Grand, and San Juan counties.

Central Utah - Includes Juab, Millard, Piute, Sevier, Wayne and Sanpete counties.

Southwest Utah - Includes Garfield, Iron, Kane, Washington, and Beaver counties.

Tri-County - Includes Daggett, Duchesne, Uintah counties.

Weber-Morgan - Includes Weber and Morgan counties.

Limitations and Sources of Variation

Billed Charges versus Actual Payment

This report gives the total billed charges for each visit. Although this is a useful indicator of facility performance, these totals represent the pre-contractual prices for services and procedures performed. The actual and contractual payment may differ.

APG versus CPT-4 and ICD-9

In contrast to APG summary tables, ICD-9 or CPT-4 summary tables include procedure values that are not within the required reporting range, i.e. nonsignificant. Even if CPT-4 or ICD-9 codes are restricted to significant procedure codes, the APG totals would still differ. This is due in part to the fact that not every significant procedure code is assigned a procedure APG. For instance, the CPT-4 value of 63030 (Lumbar Laminectomy-one interspace lumbar) is a significant procedure. The APG software, however, assigns an error APG value of 993 to this procedure in the outpatient setting because 63030 is classified as strictly an inpatient procedure. The APG value of 993 does not appear in the report but the CPT-4 value of 63030 does.

Peer Groups

Ambulatory surgery centers differ in the severity and complexity of cases treated. This fact can make direct comparison between two facilities or comparison of individual facilities with statewide totals difficult. Facilities with similar levels of case severity and complexity could be grouped into what are called peer groups. This kind of comparison is not done in this report. Though the distinction is made between FASCs and hospitals, there can be large differences in the severity and complexity of cases treated between two hospitals or between two FASCs.

Size, Location and Teaching Status of Facility

These three factors have an impact on the severity and complexity of procedures performed and services rendered. Larger facilities offer a more extensive array of procedures and services. These larger facilities tend to require more complex equipment as well as personnel with advanced training. Facilities located in urban areas tend to incur greater costs than their rural counterparts. Higher labor costs and a disproportionate number of elderly patients are among the factors that contribute to this difference. Medical education programs in hospitals incur higher costs due to the following: a) greater number and complexity of ancillary procedures performed, b) use of latest medical technologies, c) resident training, and d) provision of unique tertiary services such as a burn unit.

Outlier Cases

A facility's overall average charge is sometimes unduly influenced by a small number of very expensive or inexpensive procedures. An example of this would be the insertion of pacemakers (APG 078), for which the average statewide charge in 2001 was over \$11,000. The average charges for the facilities that performed these could be severely inflated, with the average charge not being representative of what is "typical" for the facility in question. Identification and exclusion of extremely high or low values (outliers) that have a large impact on the average is not done in this report.

Coding

Inter-facility variations may be a reflection of the differences in coding practices and quality of data. Inconsistent ICD-9 and CPT-4 procedure coding among facilities may lead to under reporting of procedures. For example, diagnostic cardiac catheterization is ICD-9 code 37.22 or 37.23, corresponding to CPT-4 codes 93501 through 93572. Utah has several hospitals that performed cardiac catheterization in 2001. However, only four of the hospitals reported CPT-4 codes on cardiac catheterization when it was the only procedure performed. Since the 3M APG classification is a CPT-based grouper software, the APG classification in Table 4 and Table 5 includes only the cases and charges of diagnostic cardiac catheterization (APG 076) reported by these four

hospitals. Obviously the total number of cardiac catheterization procedures is under reported when only the visits with a single CPT-4 procedure code are counted. Similar under reporting of this procedure occurs in the facility-level tables.

The data are reported as they were submitted to the Health Data Committee. Users of the data should be aware of the data quality issues noted and take it into consideration when using the report. The committee will continue to work with data suppliers to improve the quality of the Utah ambulatory surgery database.

To assure the highest quality data possible, the committee implemented the following:

1. The Utah Ambulatory Surgical Submittal Manual provides data element definitions and standards to ensure all ambulatory surgery centers will report similar data.
2. Systematic edits were put into place to identify missing or invalid data fields and ambulatory surgery centers were required to correct these.
3. Each facility is provided with a 35 day review period to validate the committee's data against their hospital records.

Despite the detailed edit and evaluation process, data quality is still an issue, but it is expected to improve over time as facilities become accustomed to reporting data. At this time, data quality should be taken into account when making decisions or comparisons based on this data.

Notes
